

VERITAS Backup Exec™

for Windows NT and Windows 2000

Agent for Microsoft SharePoint Portal Server

KEY BENEFITS

- Helps safeguard the integrity of Microsoft SharePoint Portal Server databases, indexes, and documents.
- Incorporates online non-disruptive portal protection as part of everyday backup routines, allowing complete recovery of business critical information in the event of corruption or data loss without inhibiting daily activity.

Integrate SharePoint Portal Server backups within daily backup operations.

Complete Online Portal Server Data Protection

The proliferation of corporate documentation, project collaboration and the dependence on Intranet sites led to the development of Microsoft's SharePoint Portal Server. SharePoint Portal Server is an advanced document management and collaboration application for Windows 2000 servers. It easily lets you organize, find, share and publish information over corporate Intranets and seamlessly integrates with Microsoft Office and web development tools.

VERITAS Backup Exec™ Agent for Microsoft SharePoint Portal Server is the first and only data protection product that enables administrators to incorporate online, non-disruptive application and database protection for the invaluable corporate collaboration material and documentation retained in the SharePoint Portal Server repositories.

Product Highlights

- Protects the local or remote SharePoint Portal Server dashboard, workspaces, indexes, and documents within the portal
- Online "hot" portal protection for non-disruptive backups
- Redirect SharePoint Portal database restores to alternate SPS servers for duplication and convenient disaster recovery situations
- Directly view SharePoint Portal Server protected resources from Backup Exec's graphical user interface

Usability

- Transparently integrates online or "hot" SharePoint Portal Server backups within regularly scheduled network protection routines.
- Quickly and easily makes a full backup of the workspace and all relevant data from other dependent information stores.
- Full protection of the following SharePoint Portal components – workspaces; log files; the Microsoft Search Service (MSSearch – property store, subscription store, full-text files, and propagated indexes); configuration information (Web Storage System, content source information, server properties, and access accounts); Applications folders; and Shortcuts to content sources.
- Flexible backup launch option for SPS allow backup jobs to be launched immediately, scheduled, or saved for later execution.
- Easily redirect a restore of SharePoint Portal Server to create duplicate copies of a master SharePoint Portal Server dashboard across an organization's global network.

Reliability

- Uses the native SharePoint Portal Server APIs for both backups and restores, ensuring reliable and consistent SharePoint Portal Server protection.
- Integrates with the VERITAS Backup Exec Intelligent Disaster Recovery Option™ for a rapid, bare-metal system disaster recovery to the last full, incremental, or differential backup, complete with identical configuration of the operating system, user profiles, updates, and other applications.

Performance

- The VERITAS patented Agent Accelerator technology allows for localized source compression and distributed processing, decreasing the amount of network traffic and the time needed to back up remote SharePoint Portal Server machines.**
- Data Staging – Quickly backup and recover SharePoint Portal Server repositories by staging backups to a hard drive or RAID system prior to a nightly full backup to tape.
- LAN-free SharePoint Portal Server Backup – Supports storage area networks (SAN), with SAN Shared Storage Option increasing backup and recovery performance over a fibre channel network.***

How It All Works:

Backup Exec Agent for Microsoft SharePoint Portal Server (SPS) communicates with the backup API, to initiate standard backup or recovery operations. Simply put, the Agent for SharePoint Portal Server facilitates the movement of data, including Web Storage System files-dashboards, workspaces, log files, and backup patch files, from SPS to storage media during backups. Similarly, during restores, the Agent for Microsoft SharePoint Portal Server extracts the appropriate data from storage media to recover the, workspaces, documents, search data, etc.

Complete Online Portal Server Data Protection

Windows 2000 Backup Server Requirements

- Microsoft SharePoint Portal Server, v1.x
- Microsoft Windows 2000
- VERITAS Backup Exec™ for Windows NT and Windows 2000 v8.6
- VERITAS Backup Exec™ Agent for Microsoft SharePoint Portal Server, v8.6
- VERITAS Remote Agent for Windows NT and Windows 2000,* for remote SharePoint Portal Server protection

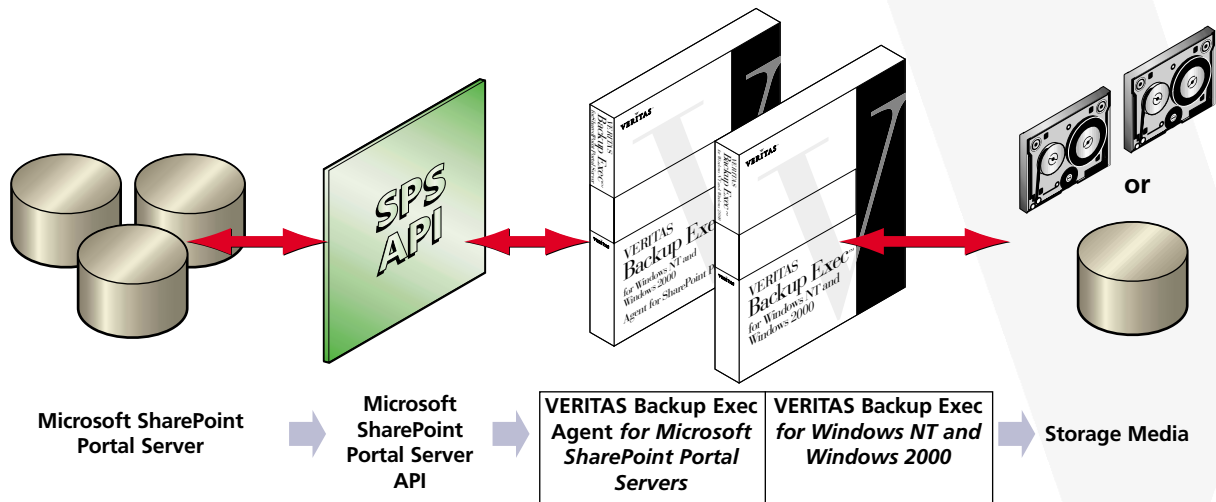

* Option/Agent sold separately

** Remote Agent for Windows NT and Windows 2000 required

*** Backup Exec SAN Shared Storage Option required

Easily redirect a full system restore to an alternate SharePoint Portal Server in the event of a server failure.
